Chino, California 91710 | (949) 522-0920 | tonylin0826@gmail.com | LinkedIn | Portfolio

TECHNICAL SKILLS

Languages:	Javascript, Typescript, C, C++, Java, Kotlin, Python
Web Technologies:	React, Next.js, Angular, Node.js, HTTP, REST
Others:	IoT, MQTT, Git, AWS, Docker, K8s, Architectural Design

EXPERIENCES

Senior Software Engineer | Smartsheet Inc. | Bellevue, Washington Jan 2024 – Present

- Owned the AI landing page end-to-end and expanded it from discovery to in-product generation (content + formulas) by integrating OpenAI GPT via a secure backend, driving 42k+ weekly active usage of AI features.
- Built and launched a formula editor for table view with auto-complete, function signature helper, syntax highlighting, and legacy parser integration, adopted at scale with 120k+ monthly active uses.
- Built a secure developer tunneling solution enabling staging Kubernetes traffic to route to local services using mTLS, reducing development costs and testing time by ~90%.
- **Tech stacks**: React, Typescript, Kotlin, Kubernetes, LangChain

Principal Full-Stack Engineer | GoSite, Inc. | San Diego, California Jun 2021 – Dec 2023

- Directed development of GoSite's Estimate product, expanding use-case coverage for service-based industries by 70%
- Led implementation of pricing page and self-service checkout, reducing time required for new pricing rollouts by 50%
- Orchestrated refactoring of legacy codebase, boosting system stability by 20%
- Mentored a team of developers, enhancing code quality by 50%
- Honored with the "Key Contributor Award" within the Engineering organization
- **Tech stacks**: Next.js, React, Typescript, MongoDB, AWS

Senior Software Engineer | Ardomus Network Corporation | Taiwan Dec 2016 – Feb 2021

Lead software engineers for designing, architecting, and building software for Smart Cities, Smart Buildings, and Smart Homes.

- Spearheaded the design and development of a Head-End System (HES) for Taiwan's Advanced Metering Infrastructure (AMI), managing over 70k meters and FAN modules.
- Created App Builder, a customizable web application, dramatically minimizing the effort required by Systems Integrators for smart homes/buildings construction
- Engineered an IFTTT-like engine with a Node-RED-like user interface for Venation Series Smart Building Gateway
- Crafted an embedded HTTP server library in C++, incorporating features like non-blocking IO to boost responsiveness for the embedded web server in the Venation Series Smart Building Gateway
- **Tech stacks**: Angular, Python, C++, Node.js, MySQL

EDUCATION

Bachelor of Computer Science | Yuan Ze University | Taiwan Jan 2016

PROJECTS

Cotec.io | https://www.cotec.io Jan 2023

Best payment platform for small business owners

- **Tech stacks**: Next.js, Typescript, Go, MySQL, Vercel

HiKoo | https://hikoo-team.github.io/hikoo May 2020

Hikoo platform is an open source management platform for the government to better track and protect hikers

- Won 2nd place of 2020 AWS Hack for Good Hackathon
- **Tech stacks**: Angular, Nest.js, Typescript, AWS

Yeelight.io | https://www.npmjs.com/package/yeelight.io Feb 2019

Yeelight.io is a simple library for you to control YeeLight LED bulb through LAN

- 600+ downloads on NPM
- Used by 2 other open source projects
